NEWS RELEASE

Vancouver B.C., February 13, 2007, Global Minerals Ltd. (**CTG**: TSX-V) (Frankfurt: DFP) is pleased to announce that it has granted an option to earn an 80% interest in its Jen Claim block located in the Northwest Territories of Canada. The optionor is Mantle Diamonds Ltd. of Hertfordshire, England, UK.

Under the terms of the option agreement (the "Agreement"), Mantle Diamonds Ltd. can earn an 80% interest in the property from the Company by incurring or funding expenditures of not less than an aggregate CAN\$5,000,000 as follows:

- (i) CAN\$500,000 by the first anniversary date of the Agreement;
- (ii) CAN\$1,000,000 by the second anniversary date of the Agreement;
- (iii) CAN\$1,000,000 by the third anniversary date of the Agreement; and
- (iv) CAN\$2,500,000 by the fourth anniversary date of the Agreement.

The Jen Claim block area is 25km northeast of Yellowknife, Northwest Territories, Canada. The claim group is located in the Prosperous Prelude Lake area which is partially accessible by way of highway 4 (Ingraham Trail) northeast from Yellowknife.

Prior work has been directed to oval-shaped at the top of a low hill in the northeastern corner of the JEN 1 claim. Similar topographic features elsewhere in the Northwest Territories are indicators of underlying, recessive kimberlite pipes.

A prospecting/till sampling program included the collection of 10 till samples both down-ice (west-southwest) from the small lake and from drainages emanating from the lake itself. Five samples, submitted to Loring Laboratories Ltd. for microprobe analyses, were found to contain potential indicator minerals for diamonds including several varieties of garnet, ilmenite and pyroxene.

A geophysical survey, carried out over a grid centered on the small lake, consisted of magnetometer and max-min electromagnetic readings at 12.5 metre stations along 25 to 50 metres spaced grid lines. Total field magnetics disclosed the presence of a 300 x 250 metres, northwest-oriented, magnetic low which is crudely coincident with the lake.

A ten hole drilling program is planned this spring to test the lake bottom for the presence of kimberlitic material. If the presence of kimberlite is confirmed the drilling program will be expanded to determine the approximate size of the structure and to collect adequate samples for diamond analysis.

Global Minerals Ltd. is a Canadian-based company with a focus on the acquisition, exploration and development of mineral property interests.
